

## What's new in SafeGuard Enterprise 5.50

SafeGuard Enterprise version 5.50 enhances data security and compliance, improves IT efficiency and increases end-user productivity. SafeGuard Enterprise offers extended support for Windows 7, flexible and fast deployment options, and convenient password recovery.

### Key features

#### Extended support for Windows 7

» SafeGuard Enterprise modules, including Device Encryption, Data Exchange, Partner Connect and Management Center, now fully support Windows 7. 64-bit full disk encryption is available for Windows 7 and Vista. Customers benefit from broader data security coverage in mixed Windows environments including Windows 7, Vista and XP.

#### Comprehensive data protection in diverse environments

- » As full disk encryption becomes more widespread, administrators face encryption deployment challenges when end users are in offices, on the road, in remote locations, in contractor locations or at home. Administrators can deploy SafeGuard Enterprise quickly, effectively and simultaneously across all these environments.
- » New administrator access options, combined with updated policy controls, provide for a variety of deployment options in both centrally and non-centrally managed environments. Maintain security during organizational changes with easy user migration between SafeGuard environments. Organizations now have deployment flexibility going all the way from a few users to large service provider-type environments. Consistent security policies can be enforced across the enterprise, enabling stronger compliance.

#### Faster encryption rollouts

- » The server installation wizard enables administrators to install the SafeGuard Enterprise server components and Management Center with the correct configuration settings. For greater reliability, the automated, step-by-step installer can also ensure that required Microsoft components are installed with automatically managed dependencies.
- » During initial PC rollouts, Administrator Service Accounts allow administrators to perform essential tasks on PCs without triggering pre-boot environment activation. This allows end

users to claim ownership when they sign in for the first time. Administrators can roll out encryption faster while preserving the capability to audit end-user ownership of PCs.

- » Assign security officers into groups where they can automatically inherit pre-defined group roles. Rights can also be delegated. The capability for automated security officer role assignments enables faster rollouts, improving IT efficiency.

#### Local self help for forgotten passwords

- » No need to call the help desk—end users who forget their passwords can securely recover them with local self help. This benefit also extends to the recovery of forgotten Windows passwords. End users are prompted for answers to questions asked during enrollment. Local self help is available to end users in both centrally and non-centrally managed environments. Organizations benefit from improved end-user productivity and lower help desk costs.

A screenshot of a 'Local Self Help - Question 1 of 5' dialog box. The dialog has a blue header with a key icon and the SOPHOS logo. Below the header, it says 'Enter the answer to the question in the field provided below:'. The question is 'What is the maiden name of your mother?'. There is a text input field containing several asterisks. Below the input field, there is a checkbox labeled 'Hide answer' which is checked. At the bottom, there are three buttons: 'Back', 'Next', and 'Cancel'.

*Higher end-user productivity with local self help for forgotten passwords*

## SafeGuard Enterprise benefits

### Regulatory compliance

- » Consistent policies in mixed environments

### Data breach protection

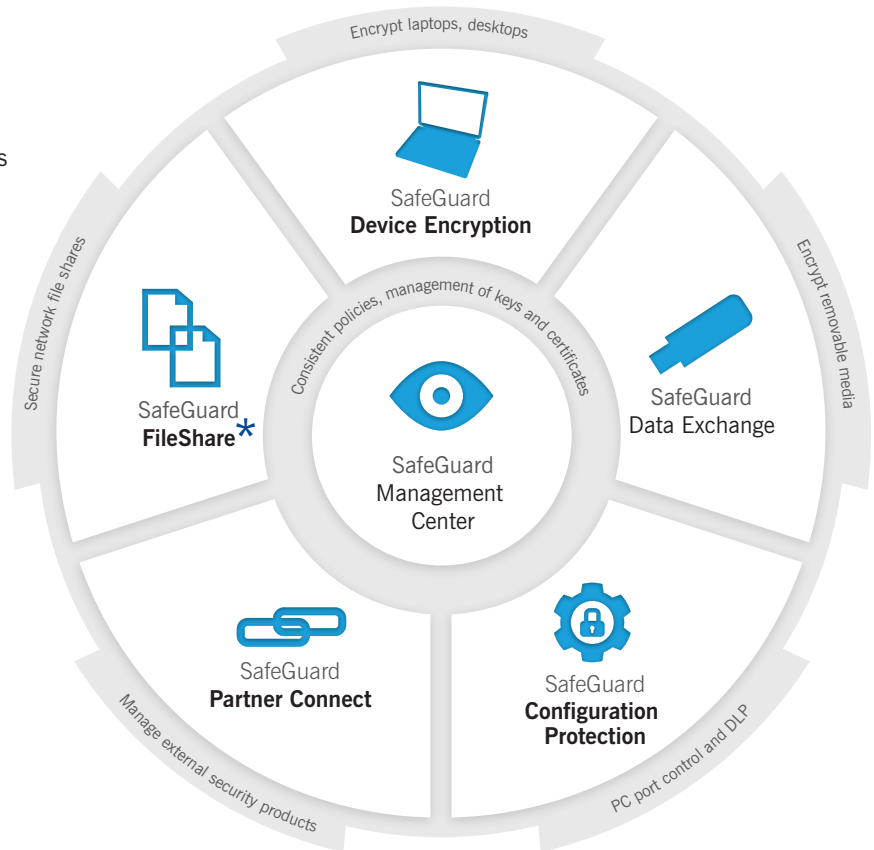

- » Comprehensive protection for data at rest, in motion and in use

### Secure productivity

- » Transparent key management

### Investment protection

- » Modular solution building on existing infrastructure

## How to upgrade to the new Sophos SafeGuard Enterprise 5.50 solution

All existing customers of Sophos SafeGuard Enterprise who are covered by the maintenance contract and have the appropriate license are entitled to receive the latest version at no additional cost. Note that SafeGuard products are sold under the perpetual license.

You can download the latest version from [www.myutimaco.com](http://www.myutimaco.com). Please follow the login instructions on that page.

If you have further questions, please contact your local Sophos representative or email [support@sophos.com](mailto:support@sophos.com).

### Value of upgrading

Upgrading to SafeGuard Enterprise 5.50 will enable you to more effectively protect your Windows 7 environment. In addition, you will find that our enhanced administrative access controls, server installation wizard and local self help will improve your IT efficiency and end-user productivity.
