

SafeGuard Easy

Simple full-disk encryption for laptops, netbooks and desktops

- ▶ Internationally recognized encryption standards for full-disk encryption of NTFS, FAT and FAT32
- ▶ Prevention from hackers from getting confidential data while computers are in hibernation mode
- ▶ Permissions that allow only authorized users to read encrypted data, even if the hard drive is removed
- ▶ Fast initial encryption option that encrypts only the parts of your hard drive in use so it won't slow your users down
- ▶ OPAL self-encrypting hard drives and two factor authentication through non-crypto token and biometric fingerprint at pre-boot² support

Sophos SafeGuard Easy keeps all the data stored on laptops and desktop computers safe without getting in the way of your users' productivity. If a computer is lost or stolen, full-disk encryption prevents anyone from reading the data. So your users can take their computers anywhere without fear of a data breach or compliance problems.

Key benefits

Strengthens your data protection with minimal effort

- Delivers data security using proven encryption algorithms that maximize security and performance
- Ensures complete security with encrypted swap and hibernation files

Helps users work efficiently

- Provides silent encryption that lets users work without interruption
- Offers secure password recovery by phone or the local self-help option
- Makes login more convenient and secure with single sign-on—there's just one password to remember

Saves deployment and management time

- Works with your existing system management tools, such as LANDesk
- Upgrades easily to SafeGuard Enterprise for centralized management

Get secure power-on authentication and authorization

You'll protect information on your PCs from unauthorized access, while keeping things simple for your users:

Provides single sign-on (SSO) to the operating system, which means users only have to remember one set of credentials

Enables you to enforce pre-defined password rules, and you'll block password penetration attacks with a hardened login process

Allows multiple users to share encrypted computers without sharing their passwords

Lets you customize the pre-boot login screen with your company's logo and instructions to give users a consistent look-and-feel

Provides service accounts that let administrators efficiently roll out the software and perform maintenance of PCs and notebooks

Allows automation of administrative activities (such as patch management) enabled by Secure Wake-On-LAN functionality

Securely recover passwords, data and forensics

SafeGuard Easy helps your IT staff save time and lets them work with tools they already know:

Lets users recover passwords through challenge/response over the phone, through a web portal or through local self-help, so they don't lose time waiting for an admin to reset their passwords

Uses Windows PE's external boot option to recover broken operating system configurations on encrypted disks

Works with familiar tools including EnCase (Guidance Software), Computrace (Absolute Software), AccessData and Kroll Ontrack

Integrates with Lenovo Rescue and Recovery for secure recovery of encrypted operating systems and data

Simplify set up and maintenance

Our Policy Editor lets you quickly create your initial security configuration policies. If you need to update the initial policies after deployment, you can use any standard software management tools to modify and reapply your policies.

Install quickly and remotely

For central, unattended installation, use standard MSI packages to deploy SafeGuard Easy to users' computers:

We make network rollout easy because there's no end user involvement during installation

You'll save time by choosing the fast initial encryption option, which only encrypts areas of a disk partition that are in use

Customize your reporting

A scriptable tool lets you query and report on encryption status, product version and other features. You can use this tool with most system management and reporting consoles to create custom reports.

Manage disk encryption centrally with SafeGuard Enterprise (option)

When you need to manage everything from one central point, simply upgrade from SafeGuard Easy to SafeGuard Enterprise. There's no need to decrypt and re-encrypt drives when you upgrade. And when you upgrade you also get much more, including advanced key management, extended policy administration, and token and smartcard support.

System requirements

Operating systems

- Microsoft Windows 7 (32 and 64 bit)
- Microsoft Windows Vista (32 and 64 bit; Service Pack 1, Service Pack 2)
- Microsoft Windows XP (32 bit; Service Pack 2, Service Pack 3)

Certifications

- Common Criteria EAL 3+
- Uses FIPS 140-2 validated cryptography

Standards and protocols

- Symmetrical encryption: AES 128/256 bit
- Asymmetrical encryption: RSA
- Hash functions: SHA-256, SHA-512
- Password hashing: PKCS #5, PKCS #12

Language versions

- English, French, German, Italian, Japanese, Spanish
- Unicode-based support for other languages
